

How long does it take to fall?

- The Occupational Health and Safety Regulation requires workers to use a fall protection system
 - Where they could fall at least 3 m (10 ft.) or
 - Where a fall from a lesser height may result in serious injury
- Workers must be trained thoroughly in the safe use and limitations of personal fall protection equipment including safety belts, harnesses, lanyards, and lifelines.
- Many workers believe that they have time to regain their balance before they fall. This belief is not always correct.
- The following table indicates how far you can fall in just a few seconds:

Time <i>(seconds)</i>	Distance <i>(metres)</i>	Distance <i>(feet)</i>
0.5	1.2	4
1	5	16
1.5	11	36
2	20	64
2.5	31	100
3	44	144
4	78	256

- You may not have time to grab hold of something safe, but you can still prevent a tragedy. Properly maintained and worn, a safety belt or full body harness attached to a secure anchor could save your life.
